Bussin User Guide

2026-09-30

Bussin runs your school buses from one screen: you plan each trip, drivers carry a phone that reports where the bus is, and parents see when to walk to the stop. This guide walks through every screen in plain language, with pictures. The orange numbered circles in each picture match the numbered steps under it.

Before you start: why you'll like Bussin

- **Dispatch tells you what needs attention.** You do not need to hunt for problems. Only exceptions show up, each in plain words with a button that goes straight to the fix. When all is well, you see one green "Nothing needs you."
- **Set it and forget it for drivers and monitors.** Plan trips days ahead and assign the staff. Each trip shows up on that person's phone by itself when it is time. No calls, no texts, no paper schedule.
- **Routes are built once.** Save every route and stop at the start of the season, AM and PM, and reuse them every day. The children's roster can be loaded from a file in one go.
- **Ride Check for monitors.** Every child is tapped on and off, stop by stop. Anyone missed or still aboard is flagged right away, and no trip is done until someone confirms the bus is empty.
- **Drivers barely touch the phone.** Arrivals and departures record themselves from GPS. The driver taps Start, then Finish. If the signal drops, the phone saves its locations and sends them when it comes back.
- **Driver mode keeps it simple and private.** It hides every count of children. A lock stops anyone from switching modes by accident.
- **Parents stop calling to ask where the bus is.** They see the bus coming, how many stops away it is, and a "Leave home in" countdown based on their own walk to the stop.
- **Swap a bus in seconds.** Buses are not tied to routes. If one breaks down, plan the trip on another bus and everything else stays the same.
- **Every trip is on record.** Transit keeps each arrival, departure and check, with the time and who did it, for answering questions later.
- **Nothing to install.** It runs in the web browser on any computer or phone. Drivers and parents can add it to their home screen like an app.
- **24/7 IT support and monitoring.** Same-day fixes, no tickets, no hold times.

1. Who uses what

Three kinds of people use Bussin, and each one sees a different screen after signing in. You never have to pick which screen: Bussin shows the right one based on the login.

Who	Device	What they see	What they do
Office staff (admin or dispatcher)	Computer, or a phone in a pinch	The full office screen with a menu on the left	Set up routes, buses, staff and riders. Plan trips. Watch buses live.
Driver or bus staff	Their own phone	One simple screen: their trip	Start the trip, keep the phone open, finish the trip.
Parent or guardian	Their own phone	"Your bus"	See where the bus is and when to walk to the stop.

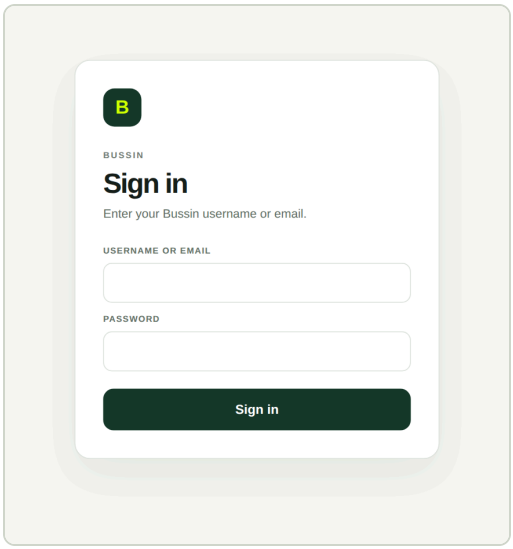

Words to know

Word	What it means in Bussin
Route	A fixed list of stops in order, like "Maplewood North AM."
Route family	The group a route belongs to, usually one AM and one PM version with the same name, like "Maplewood North."
Stop	One pickup or drop-off spot on a route.
Bus	A vehicle, like "Bus 1." A bus is not tied to a route. You pair them each time you plan a trip.
Trip	One bus driving one route at one time on one day. Example: Bus 1, Maplewood North PM, 12:48 PM today.
Staff / driver	A person with a staff login who runs a trip from their phone.
Rider	A child who rides the bus.
Guardian	A parent or other adult linked to a rider. A guardian can have a login, but does not need one.

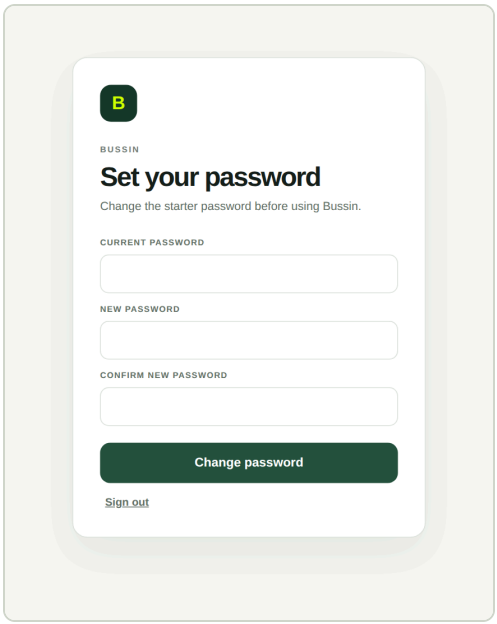

Word	What it means in Bussin
GPS	The location the driver's phone sends. "GPS stale" means the phone has gone quiet for over a minute.
ETA	Estimated time of arrival at a stop.

2. Signing in for the first time

Everyone gets a temporary password the first time, and Bussin makes them replace it before doing anything else. After the new password is saved, Bussin signs you out on purpose. Sign in again with the new password and you are in.

1. Open the Bussin web address in your browser (Chrome, Safari or Edge all work).
2. In **Username or email**, type your username (for example `dana_reyes`) or your email address. Parents always use their email.
3. Type your password and click **Sign in**.

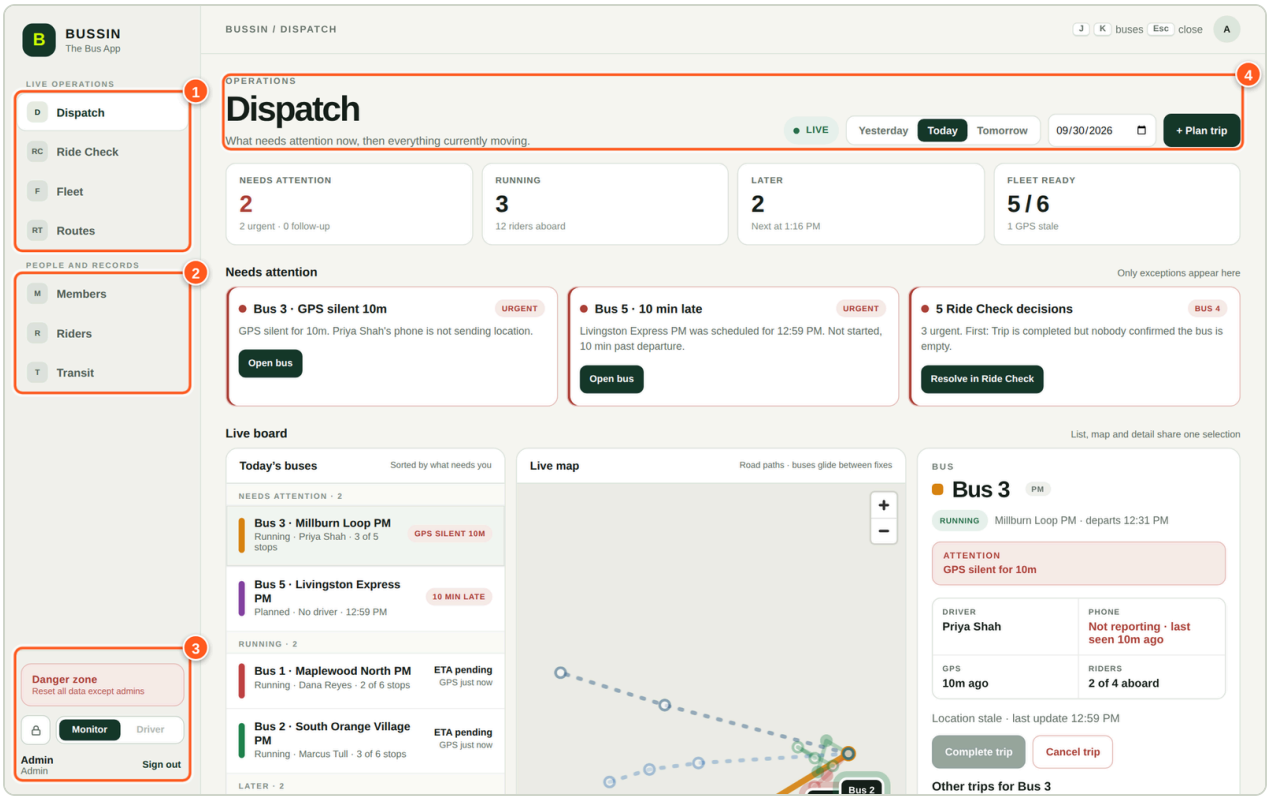

4. If you see **Set your password**, type the temporary password in **Current password**.
5. Make up a new password of **12 characters or more** and type it in both **New password** and **Confirm new password**. A short sentence works well, like `blue bus at nine`.
6. Click **Change password**. You land back on the sign-in screen. Sign in with the new password.

If a sign-in keeps failing, stop after a few tries. Bussin pauses a login after 10 wrong passwords, and you will see how many minutes to wait. An admin can reset a parent's password from the Riders page (section 8).

3. Finding your way around

The office screen has a menu down the left side and the page you picked on the right. Click any word in the menu to go to that page. The page you are on is shown as a white box in the menu, and its name also appears at the very top (for example **BUSSIN / DISPATCH**).

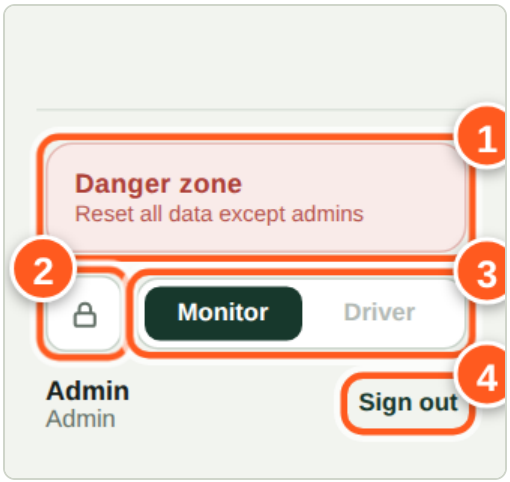

1. **Live operations**: the pages you use during the day. **Dispatch** (the live board), **Ride Check** (every child accounted for), **Fleet** (buses) and **Routes** (stops).

2. **People and records**: **Members** (staff logins), **Riders** (children and parents) and **Transit** (history of past trips). Members and Riders only appear for admins.

3. **Bottom-left controls**: the Danger zone, the lock and mode switch, your name and **Sign out**. These are explained below and in section 13.

4. **The page itself**: every page starts with a big title and one line saying what it is for. Buttons for adding things (like **+ Plan trip** or **Add bus**) sit at the top right.

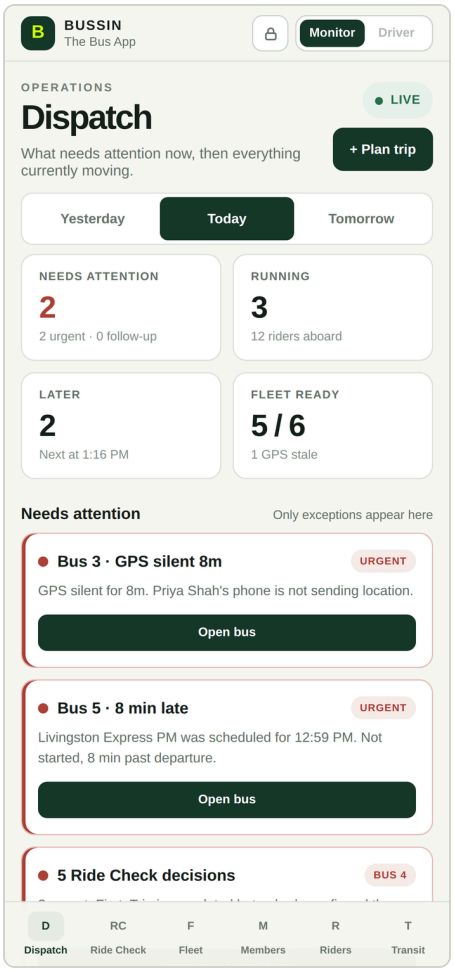

1. **Danger zone**: erases all data. Do not click this during normal use (section 16).
2. **The lock**: double-click it to unlock the mode switch next to it.
3. **Monitor / Driver**: switches what the menu shows (section 13).
4. **Sign out**: click when you leave the computer.

Pop-out panels

When you click a button like **Add bus** or **Plan trip**, a panel slides in from the right and the rest of the screen goes grey. Fill it in and press the dark button at the bottom. To back out without saving, click **Close** at the top right of the panel, click the grey area, or press the **Esc** key.

On a phone or small screen

If the window is narrower than a laptop, the same office pages rearrange themselves: the menu moves to a row of tabs along the bottom, and boxes stack on top of each other. Everything works the same way. The Routes editor is the one page that needs a full-size computer screen.

4. Setting up: do it in this order

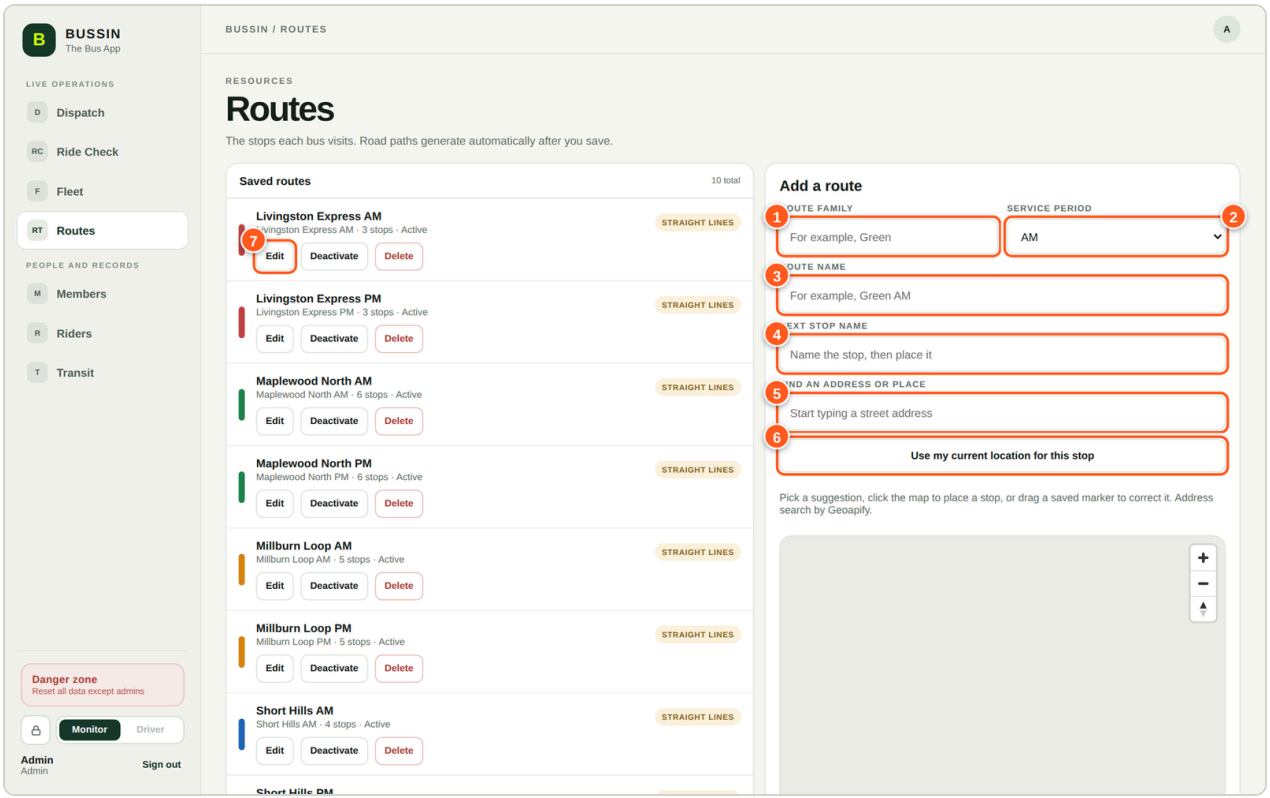

Each step needs the one before it, so setting up out of order leads to empty drop-down lists. A new, empty Bussin will even tell you so, with notes like "Add a bus in Fleet first." Do this once at the start of the season; after that, you only repeat steps 5 and 6.

1. **Routes**: create each route and its stops (section 5). Riders and trips both need these.
2. **Fleet**: add your buses (section 6).
3. **Members**: create a login for each driver or bus staff member (section 7).
4. **Riders**: add guardians first, then each child with their AM and PM stops (section 8).
5. **Plan trips**: pair a bus with a route and a time (section 9).
6. **Assign a driver** to each trip (section 9).

After that, the daily routine is simple: open **Dispatch** in the morning, deal with anything in the red **Needs attention** boxes, and check **Ride Check** after each run.

5. Routes: the stops each bus visits

A route is a named list of stops in the order the bus visits them. Build one route for the morning (AM) and a separate one for the afternoon (PM), even if they use the same streets. Only admins can add or change routes, and this page works best on a full-size computer.

Add a route

1. **Route family**: the shared name for the AM and PM versions, for example `Green` or `Maplewood North`.
2. **Service period**: pick **AM** or **PM**.
3. **Route name**: the full name people will see, for example `Green AM`.
4. **Next stop name**: type what drivers and parents call this stop, for example `Oak St & Elm`. Name it first, then place it.
5. **Find an address or place**: start typing a street address and pick the right one from the list that drops down. An orange pin appears on the map. Check that the pin sits on the

actual pickup spot, drag it if needed, then click **Add stop at this pin**. You can also skip the address and just click the map where the stop is.

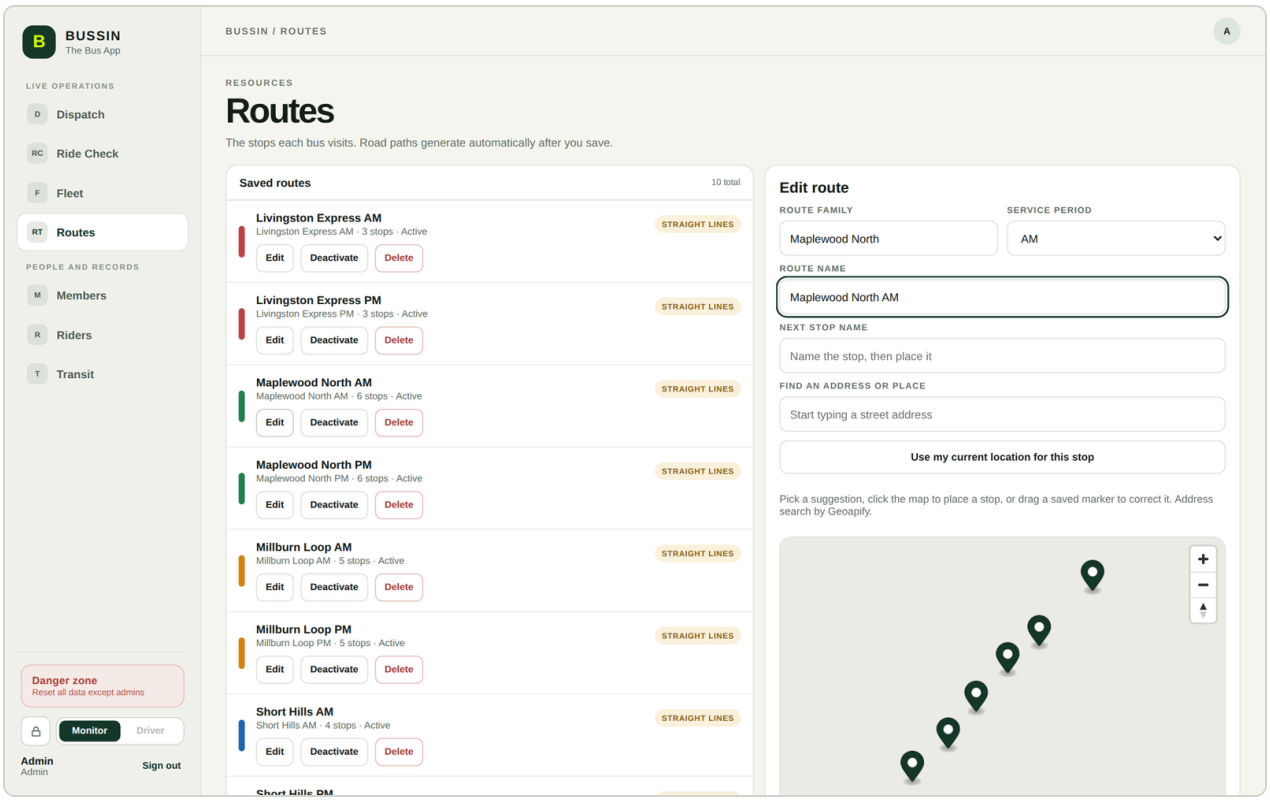

6. **Use my current location for this stop**: handy if you are standing at the stop with a phone or laptop.

Repeat steps 4 and 5 for every stop, in the order the bus drives them. The stops appear in a list under the map. Use **Up** and **Down** to fix the order, or **Remove** to take one out. When the list is right, click **Save route** at the bottom.

Change, pause or remove a route

7. Each saved route on the left has three buttons:

    - **Edit** loads the route into the form on the right. Change what you need and click **Save changes**, or **Cancel editing** to back out.
    - **Deactivate** hides the route from trip planning without losing it. Click **Reactivate** to bring it back.
    - **Delete** removes it for good. Bussin asks you to confirm with **Yes, delete**, or **Go back**.

The small tag next to each route says **Road path ready** once Bussin has worked out the real roads between stops, which makes the live map and arrival times more accurate. Until then it says **Straight lines**, and the map simply joins the stops with straight lines. Everything still works either way.

6. Fleet: your buses

Fleet lists every bus, what it is doing right now, who is driving it and how fresh its location is. Buses are not tied to a route: you pair a bus with a route each time you plan a trip.

1. **Add bus**: type a name everyone will recognize (for example `Bus 7`) and click **Add bus**. Admins only.

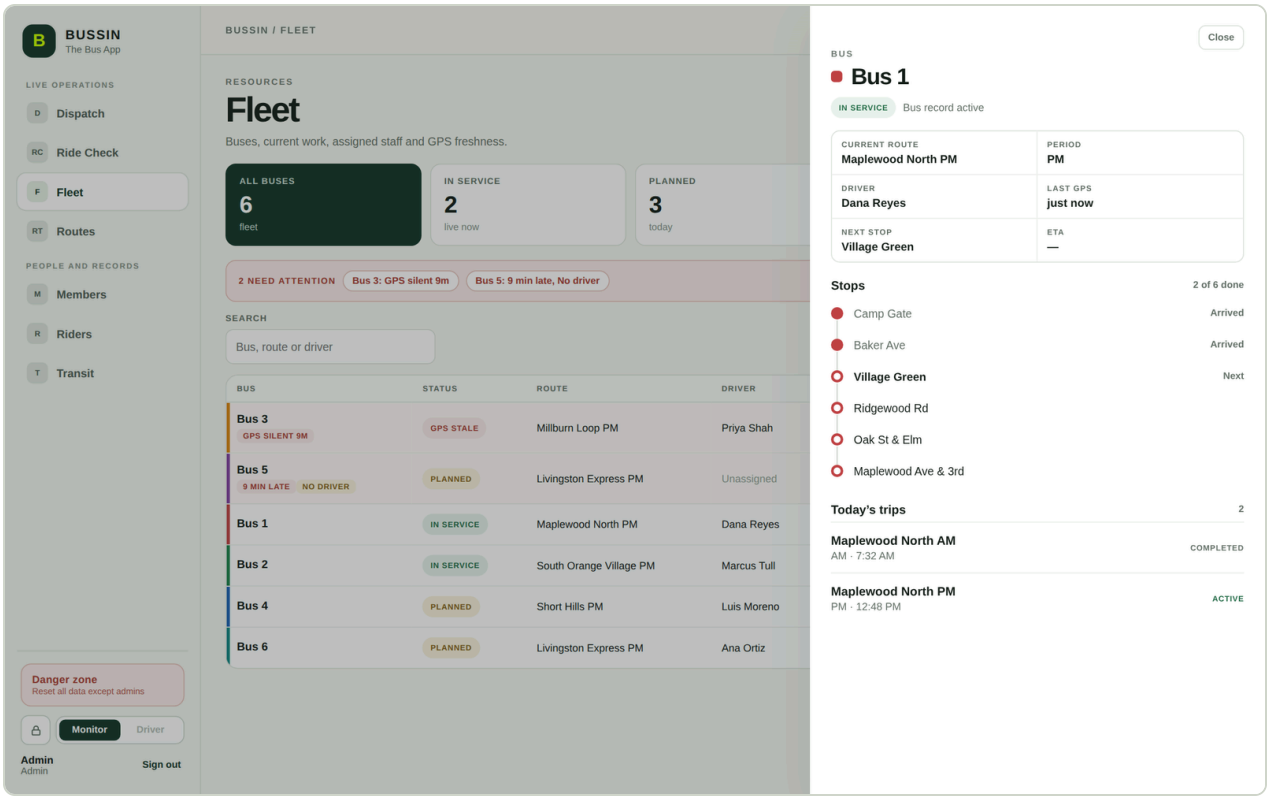

2. **Routes**: shows the list of routes without leaving this page.

3. **The count boxes**: each box is also a filter. Click **GPS STALE** to show only buses whose phones have gone quiet, or **ALL BUSES** to see everything again. A red strip under the boxes names any bus that needs attention; click a name to open it.

4. **The bus table**: one row per bus. Buses that need attention float to the top. Click any row to open that bus's details.

Status tag	What it means
IN SERVICE	Driving a trip right now and reporting its location.

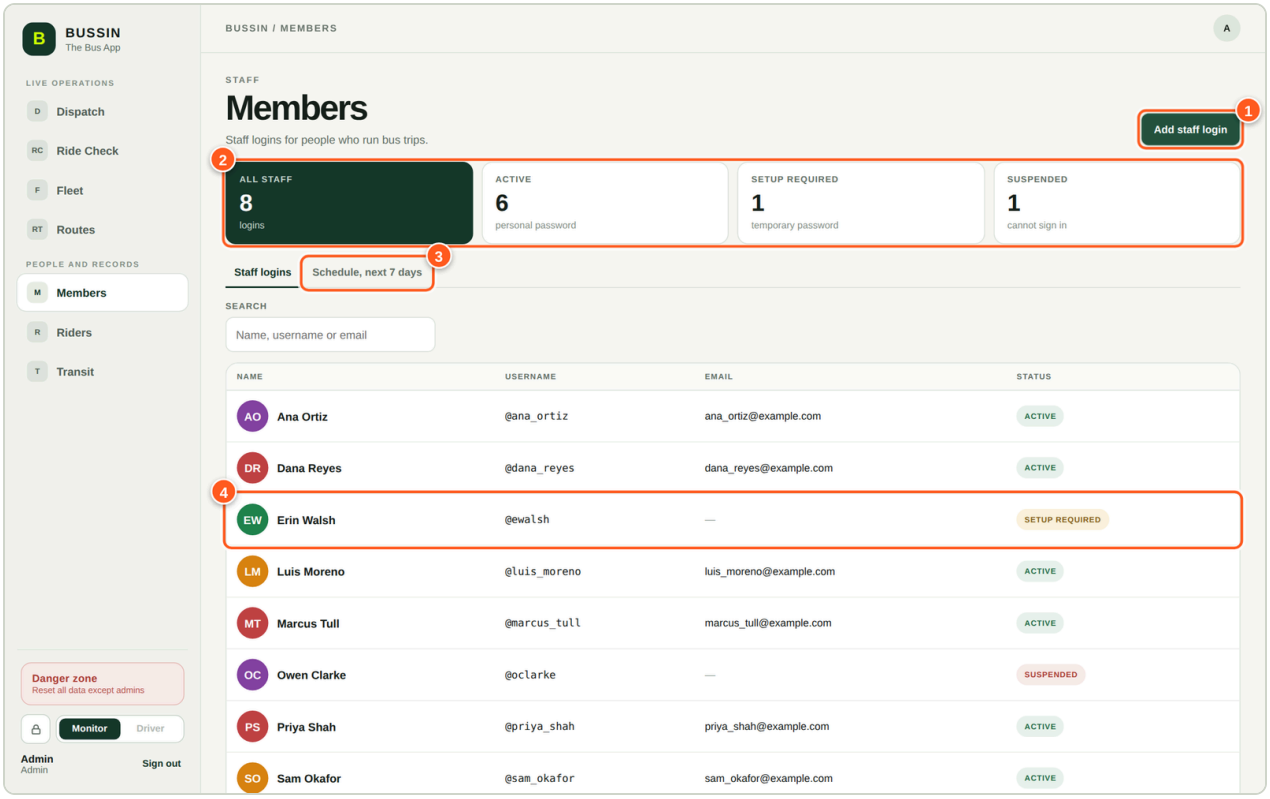

Status tag	What it means
GPS STALE	On a trip, but the driver's phone has not sent a location in over 60 seconds.
PLANNED	Has a trip later today that has not started.
AVAILABLE	No trips today.
INACTIVE	Switched off and not used for planning.

The detail panel shows the current route, the driver, when the last location came in, the next stop, a list of stops with **Arrived** or **Next** beside each, and every trip that bus has today.

7. Members: staff logins

Every driver or bus staff member needs their own login so Bussin knows whose phone is on which bus. This page is for admins only.

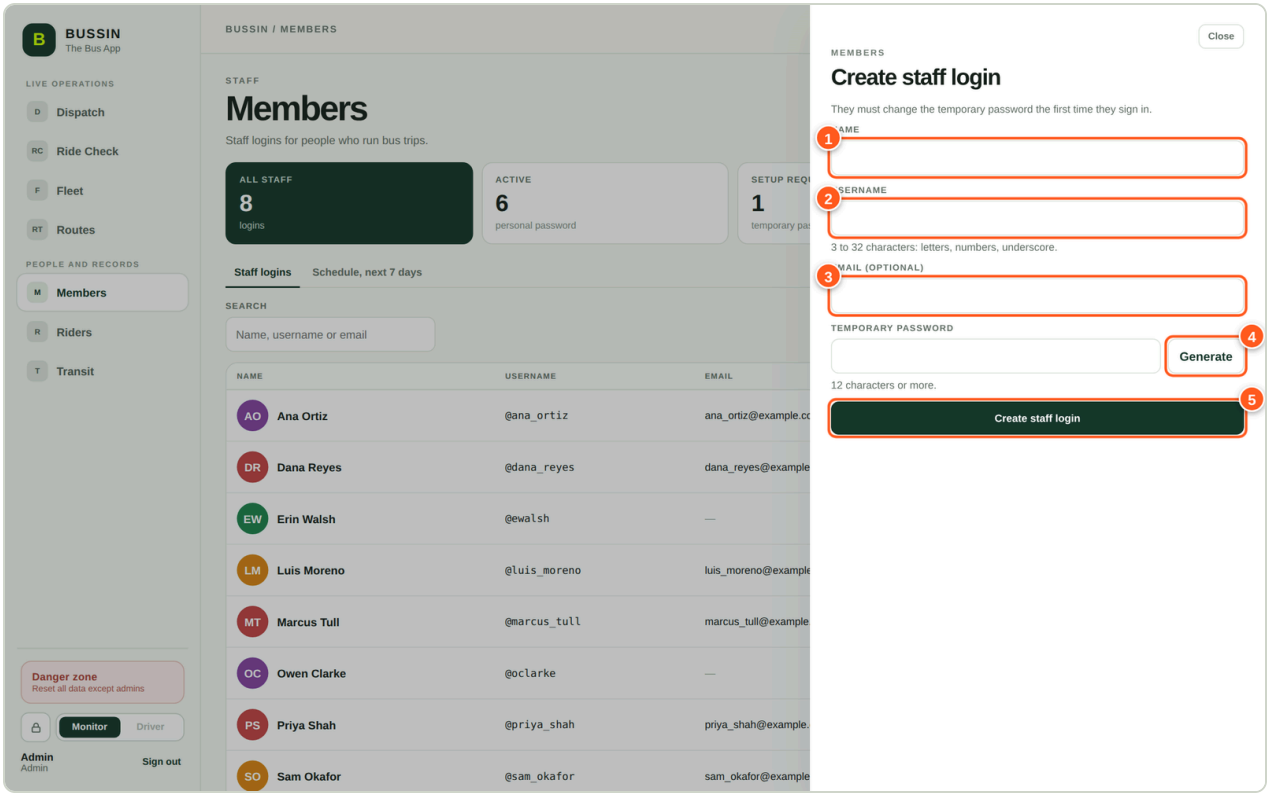

1. **Add staff login**: opens the form below.

2. **The count boxes**: how many logins there are, how many are **Active** (set their own password), **Setup required** (still on the temporary password) and **Suspended** (cannot sign in). Click a box to show only those people.

3. **Schedule, next 7 days**: a list of every staff trip coming up, by day and time. Use it to check that nobody is double-booked or missing.

4. **A person's row**: click it to see their username, email, password status and their trips for the next week. The orange **SETUP REQUIRED** tag means they have not signed in yet.

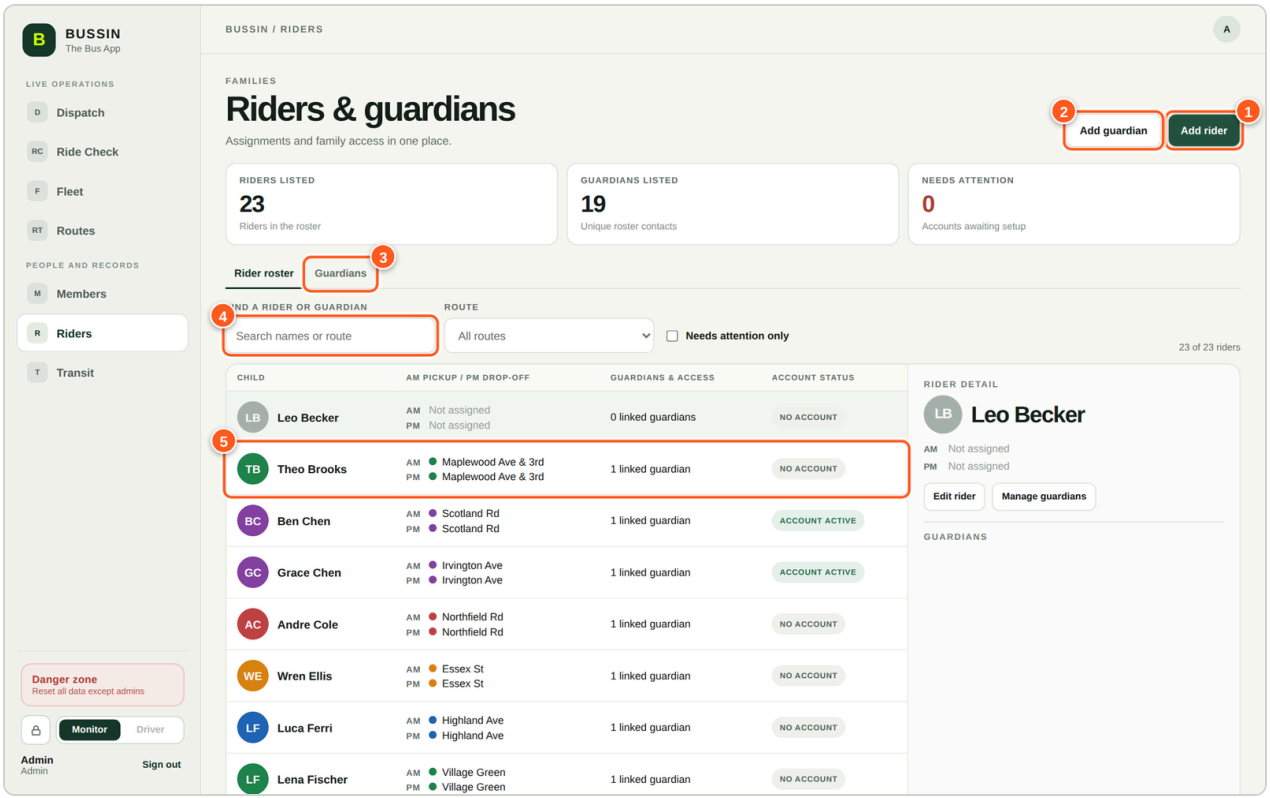

Create a staff login

1. **Name**: their full name, as it should appear on Dispatch.
2. **Username**: what they will type to sign in. 3 to 32 characters, using only letters, numbers and underscores, for example `dana_reyes`.
3. **Email (optional)**: lets them sign in with their email instead of the username.
4. **Generate**: fills in a strong temporary password for you (it must be 12 characters or more).
5. Click **Create staff login**. A green note shows the username and temporary password. **Write both down now** and hand them to the person; they will set their own password the first time they sign in (section 2).

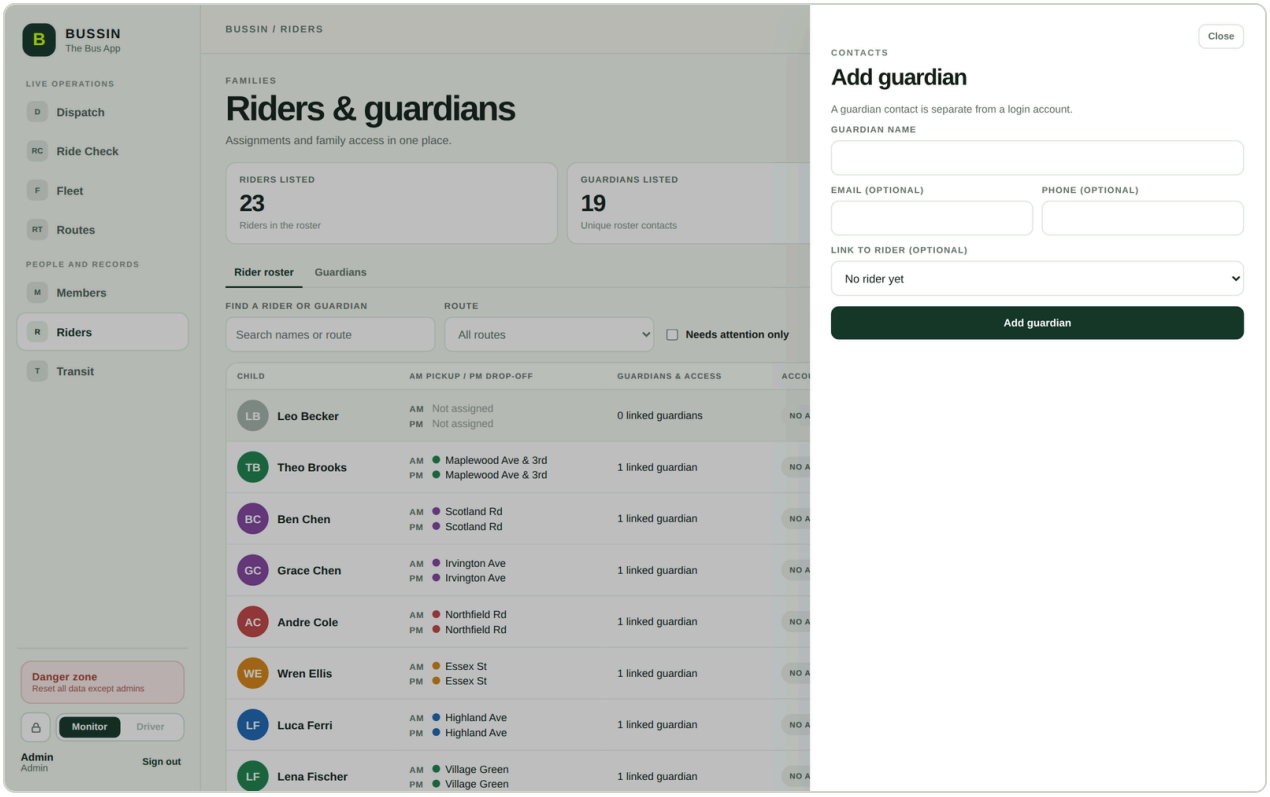

8. Riders and guardians: children and parents

This page holds every child, the adults linked to them, and which stop each child uses morning and afternoon. It is also where you turn on a parent's login. Admins only. (In the menu it is called **Riders**.)

1. **Add rider**: add a child.
2. **Add guardian**: add a parent or other adult. Do this **before** adding their child, because a child must be linked to at least one guardian.
3. **Guardians tab**: switch from the list of children to the list of adults.
4. **Find a rider or guardian**: type part of a name or route. The **Route** menu and **Needs attention only** box next to it narrow the list further.
5. **A child's row**: shows their AM pickup and PM drop-off stops, how many guardians are linked, and whether a parent login exists. Click it to see the child's details on the right, with **Edit rider** and **Manage guardians** buttons.

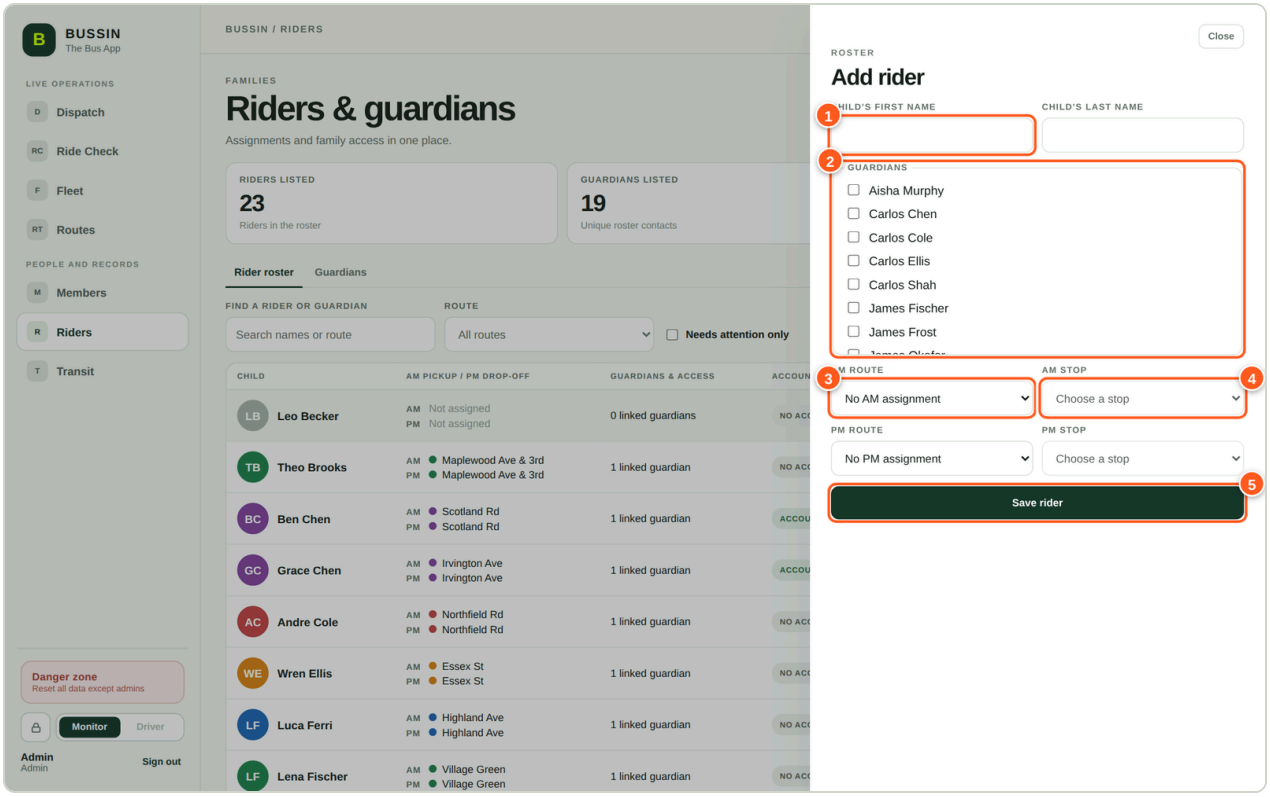

Add a guardian

1. Type the **Guardian name**.
2. Add an **Email** if the parent will use the app. An email is required to give them a login later. **Phone** is optional but useful: Ride Check shows a **Call** button with it.
3. Optionally pick a child in **Link to rider**, then click **Add guardian**.

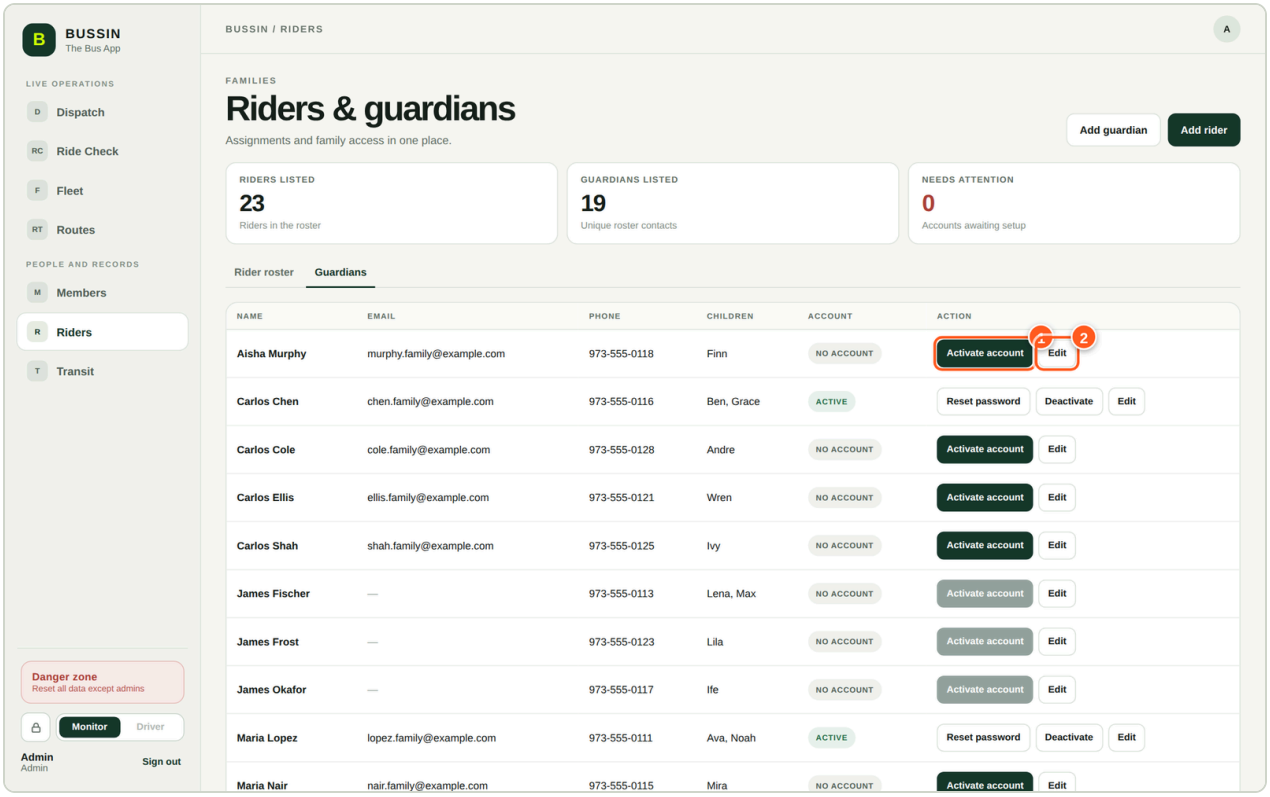

A guardian on this list is just a contact. Adding one does not send them anything or give them a login.

Add a rider (child)

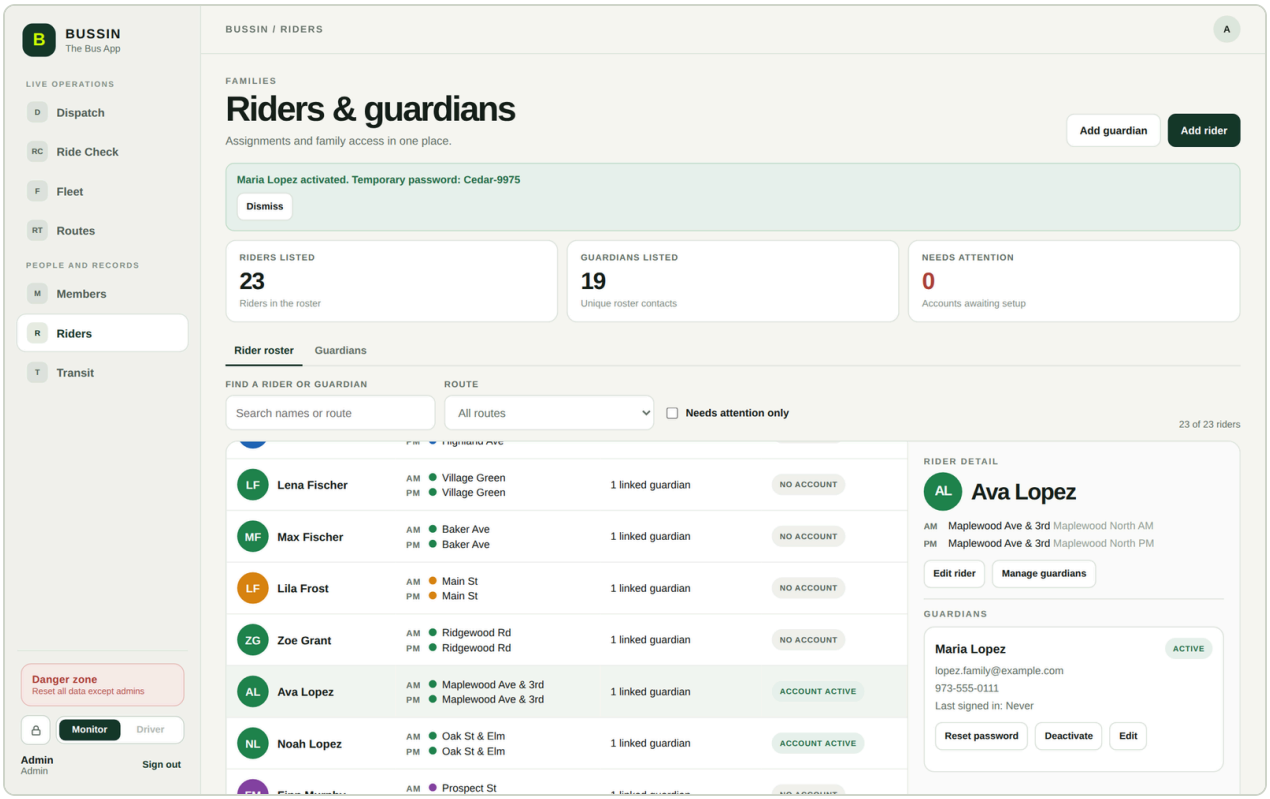

1. Type the child's first and last name.
2. Tick the box next to each **guardian** who belongs to this child.
3. **AM route**: the morning route this child rides, or leave it on **No AM assignment**.
4. **AM stop**: the stop on that route where they get on. Do the same for **PM route** and **PM stop** (where they get off).
5. Click **Save rider**.

Give a parent a login

1. On the **Guardians** tab, find the parent and click **Activate account**. (The button is greyed out if they have no email. Click **Edit**, add one, and try again.)

2. **Edit** changes their name, email or phone.

A green note at the top shows a temporary password such as `Cedar-9975`. **Write it down now**; it is shown only once. Give the parent the Bussin web address, their email, and that password. They will set their own password when they first sign in.

The account tag next to each person tells you where they stand: **NO ACCOUNT** (no login yet), **SETUP NEEDED** (login made, parent has not signed in and changed the password), and **ACCOUNT ACTIVE** (all set). For an active parent the buttons become **Reset password** (makes a new temporary password, useful when they forget theirs) and **Deactivate** (turns their login off; **Reactivate account** turns it back on).

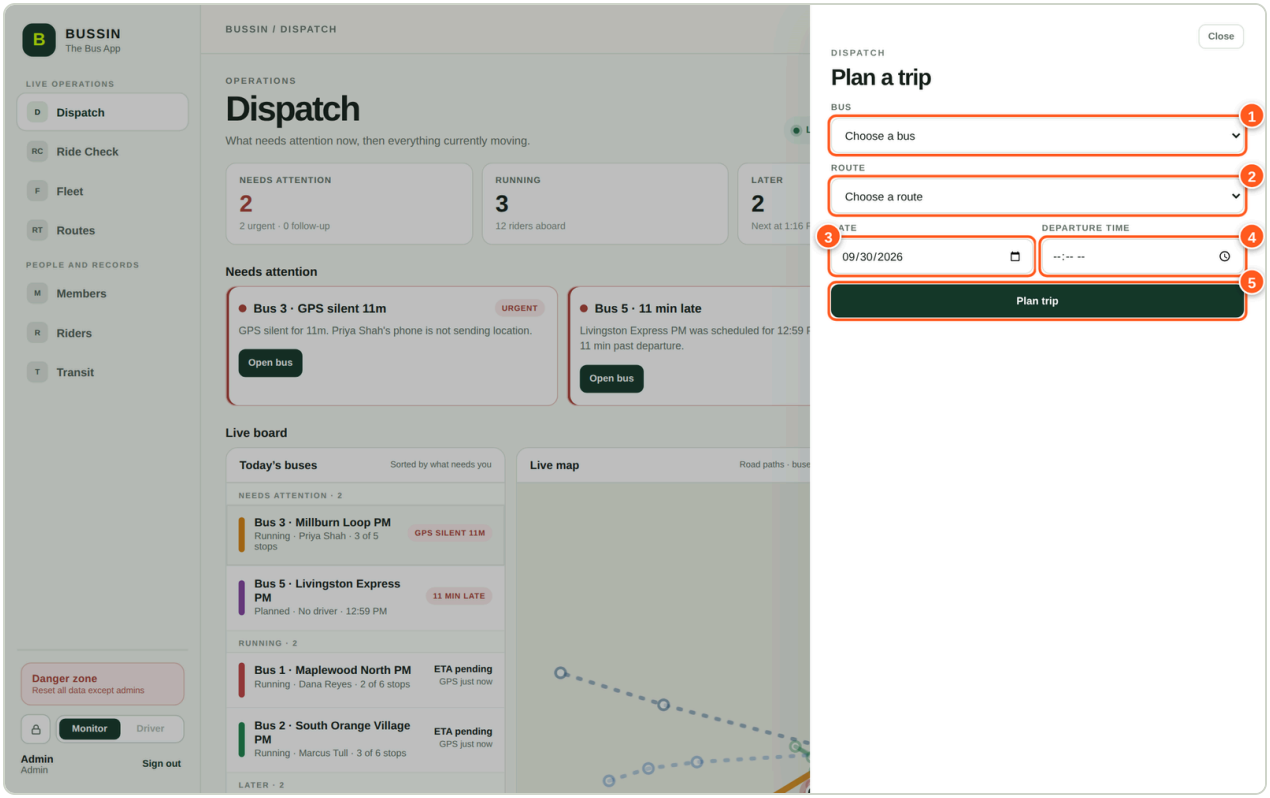

A child marked "Imported" came from a roster file your technical contact loaded. Those children's stops come from that file and cannot be edited here.

9. Planning a trip and assigning a driver

A trip is one bus running one route at one time. You plan each one ahead, then assign the person who will carry the phone. A trip without a driver cannot start, and Dispatch will flag it.

Plan a trip

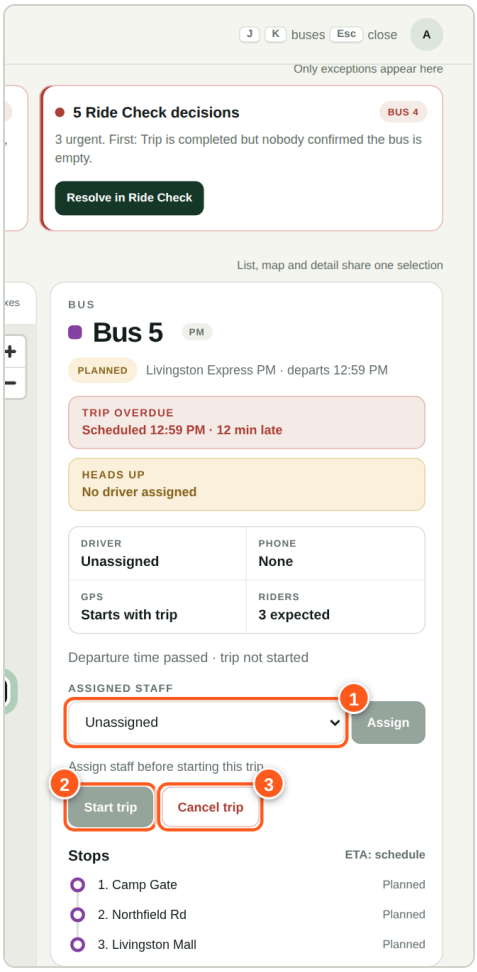

On **Dispatch**, click **+ Plan trip** at the top right.

1. **Bus**: pick which bus.
2. **Route**: pick the route. Only active routes that have stops are listed.
3. **Date**: today or any later day.
4. **Departure time**: when the bus leaves its first stop. Click the hours, type them, then the minutes, then AM or PM.
5. Click **Plan trip**. A note confirms it, and the trip shows on the Dispatch board for that day.

Assign a driver

On **Dispatch**, click the planned trip in the **Today's buses** list (or click **Open bus** on its red alert). The bus's panel opens on the right.

1. **Assigned staff**: pick the person from the list, then click **Assign** next to it. Their name replaces **Unassigned**, and the trip appears on their phone.

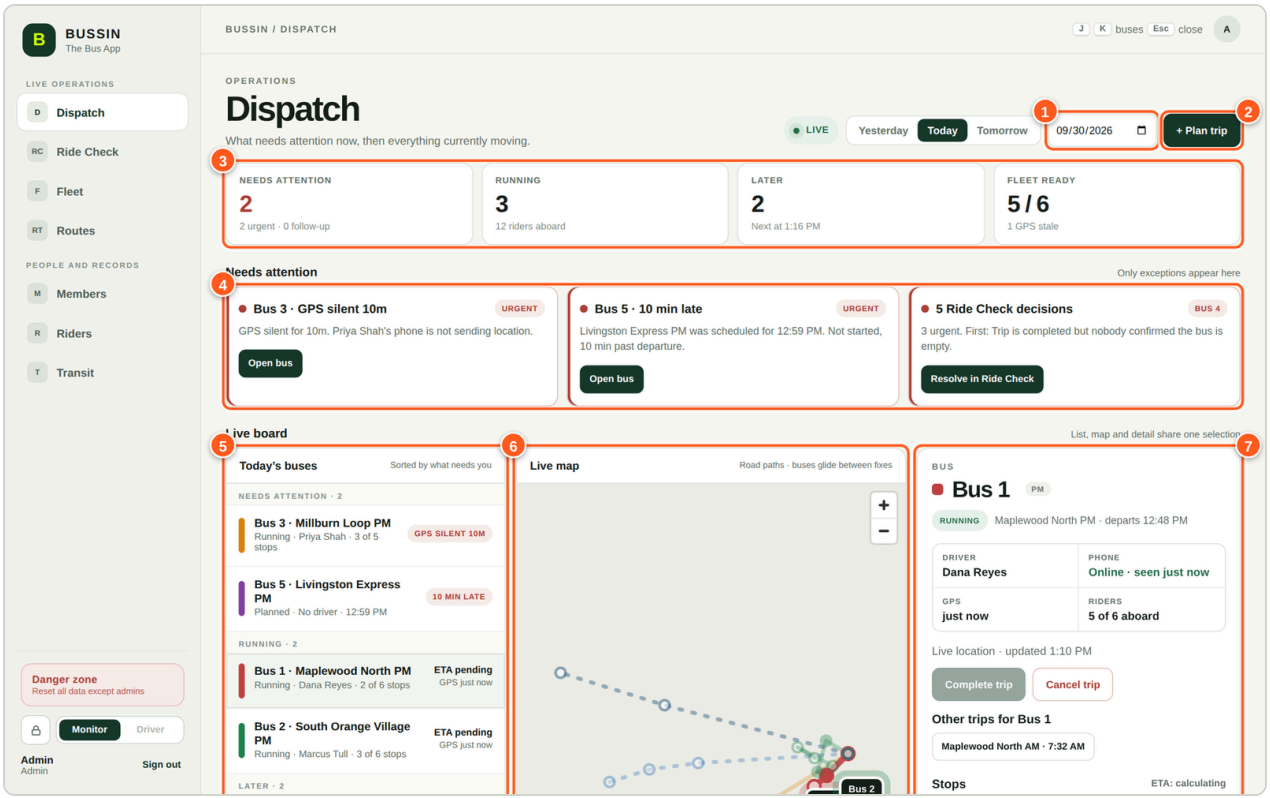

2. **Start trip**: normally the driver starts the trip from their phone. Use this button only if they cannot. If it is more than a few minutes before departure, Bussin asks whether to start early.

3. **Cancel trip**: stops a trip for good. Bussin asks you to confirm, and a cancelled trip cannot be restarted. Plan a new one if needed.

Once a trip is running, the same panel shows **Complete trip** instead. It becomes clickable when the bus has reached its last stop. The driver usually finishes the trip from their phone.

10. Dispatch: watching the day

Dispatch is the home page and the one to keep open all day. Read it top to bottom: problems first, then everything that is moving. It updates by itself; the green **LIVE** tag means it is connected. You never need to refresh.

1. **Which day**: click **Yesterday**, **Today** or **Tomorrow**, or pick any date in the date box. Looking at another day is read-only; trip buttons only work on today.

2. **+ Plan trip**: add a trip (section 9).

3. **The four count boxes**:

    - **Needs attention**: how many problems there are right now. Red means act now.
    - **Running**: buses on the road, and how many children are aboard.
    - **Later**: trips still to come today, and when the next one leaves.
    - **Fleet ready**: how many buses are reporting their location, for example 5 of 6.

4. **Needs attention cards**: one card per problem, in plain words, each with a button that takes you straight to the fix. If everything is fine you see a green **Nothing needs you** card instead.

5. **Today's buses**: every bus with a trip, sorted so the ones needing you are on top. Click one to select it.

6. **Live map**: every route in its own color, with a marker for each moving bus. The selected bus is highlighted. Use **+** and **−** to zoom.

7. **The bus panel**: details for the selected bus: driver, whether their phone is reporting, how old the last GPS is, riders aboard, each stop with its ETA, and the trip buttons.

The list, the map and the panel always show the same bus. Keyboard shortcut: press **J** and **K** to step through the buses and **Esc** to close.

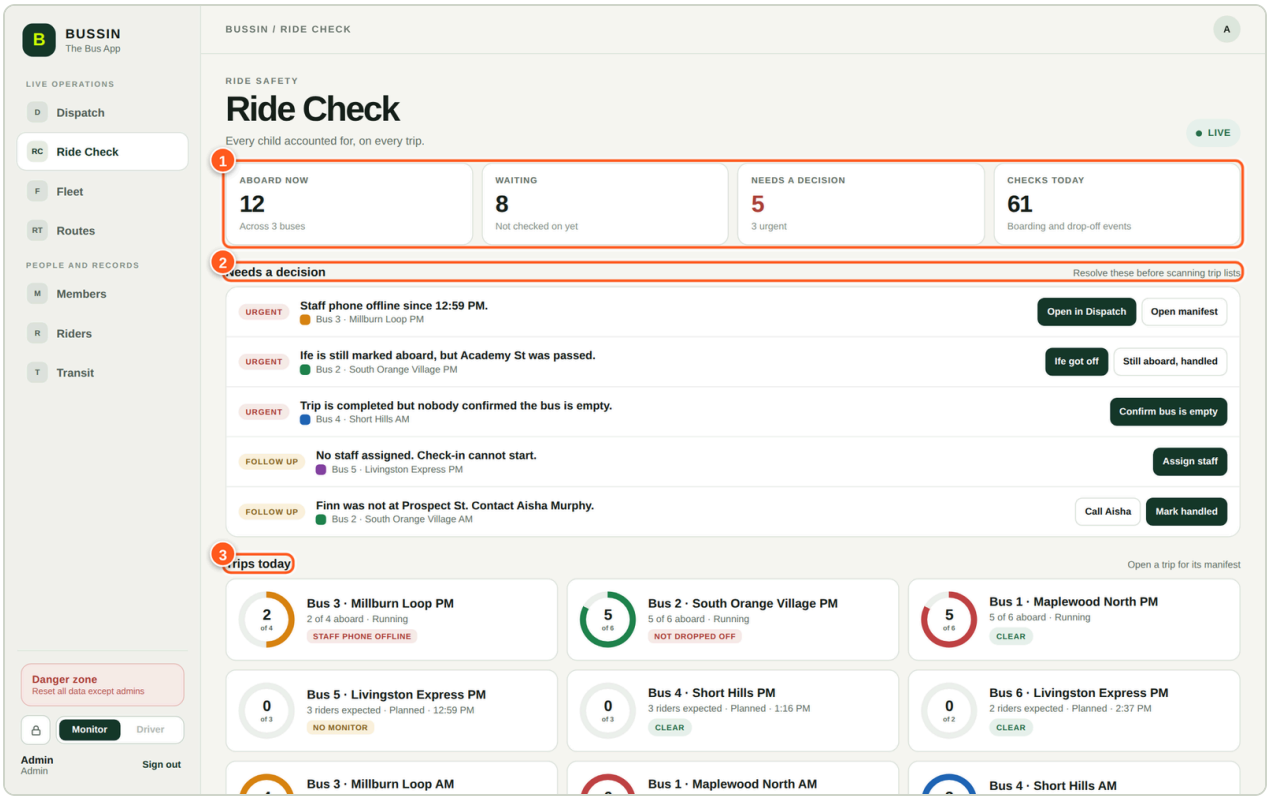

What the alerts mean and what to do

Alert you see	What happened	What to do
GPS silent (for example "GPS silent 4m")	The driver's phone stopped sending its location. Often the screen locked or the app was closed.	Click **Open bus**, then call the driver and ask them to open Bussin and tap **Keep screen on**.
"4 min late" / Departure due now	The trip's departure time has passed and nobody pressed Start.	Call the driver. If no driver is assigned, assign one (section 9).
No driver assigned	The trip has nobody to run it.	Open the bus and pick a person under **Assigned staff**.
Ride Check decisions	A child's on/off record needs a human decision.	Click **Resolve in Ride Check** (section 11).

"ETA pending" or "ETA calculating" simply means Bussin is still working out arrival times, usually right after a trip starts.

11. Ride Check: every child accounted for

Ride Check tracks each child getting on and off, so nobody is left on a bus or missed at a stop. It is used by the office and by a bus monitor riding along on a phone in **Monitor** mode. Rule of thumb: clear the **Needs a decision** list first, then look at individual trips.

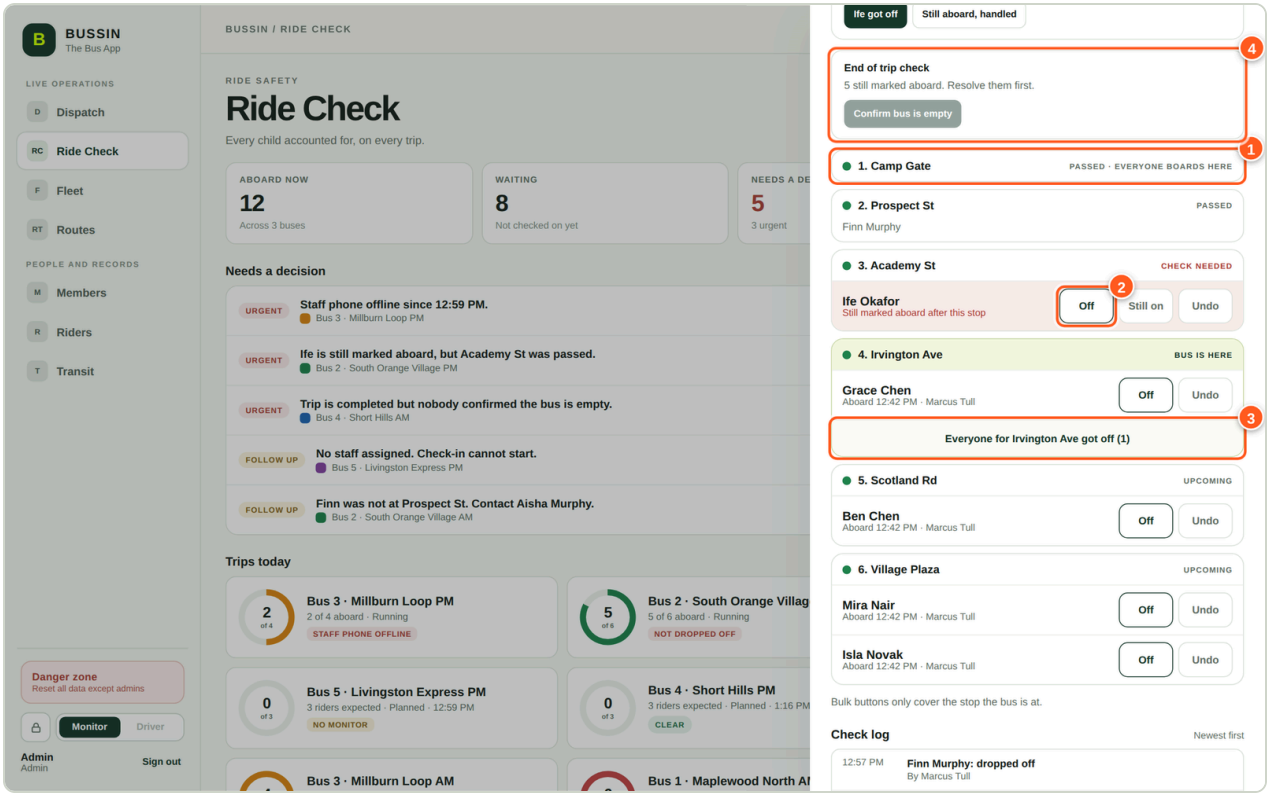

1. **The four count boxes**: **Aboard now** (children on buses right now), **Waiting** (children not checked on yet), **Needs a decision** (problems; red when urgent) and **Checks today** (every on/off tap recorded today).

2. **Needs a decision**: each line is one problem in plain words, with the button that fixes it right beside it. For example: "Ife is still marked aboard, but Academy St was passed" with **Ife got off** and **Still aboard, handled**. Or "Trip is completed but nobody confirmed the bus is empty" with **Confirm bus is empty**. When the list is clear you see **Everyone is accounted for**.

3. **Trips today**: one card per trip. The ring shows how many children are aboard out of how many are expected. Click a card to open that trip's list of children (the manifest).

The manifest: one trip, stop by stop

1. **Each stop** is a box with a label on the right: **Bus is here**, **Upcoming**, **Passed** or, in red, **Check needed**.

2. **Each child** has buttons for what just happened. Tap the one that matches:

    - **On**: got on the bus.
    - **Off** (afternoon) or **At camp** (morning): got off.
    - **No-show** (morning): was not at the stop. Then use **Call** to phone the parent, **Boarded late** if they turn up, or **Handled** once sorted.
    - **Not riding**: will not ride today. You can mark this before the trip even starts.
    - **Still on**: the child really is still aboard past their stop, on purpose.
    - **Undo**: take back the last tap.

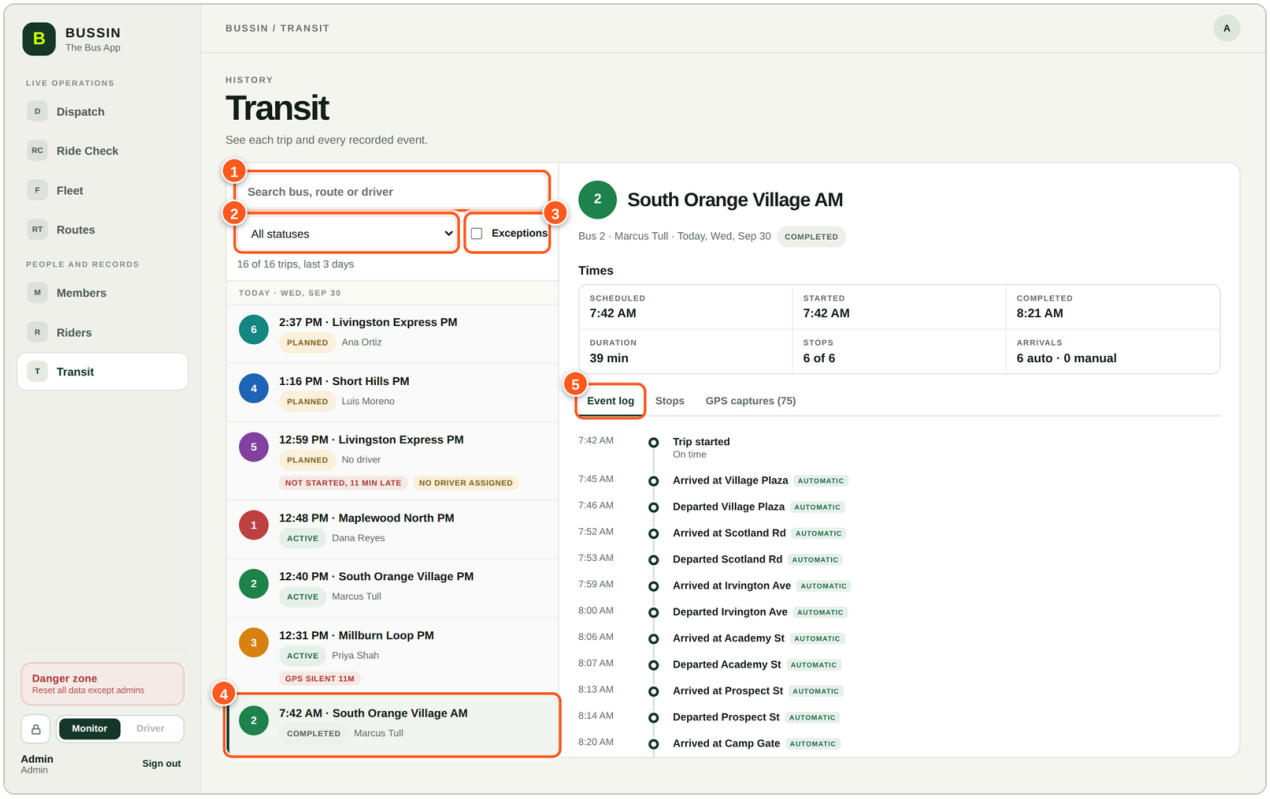

3. **Everyone at … boarded** / **Everyone for … got off**: one tap for the whole stop the bus is at. It only covers that one stop.

4. **End of trip check**: at the last stop, once nobody is marked aboard, walk the whole bus, then tap **Confirm bus is empty**. Do not skip this; an unconfirmed bus shows up as an urgent problem.

The **Check log** at the bottom lists every tap, newest first, with the time and who made it. Parents do not get automatic messages from Ride Check yet, so use the guardian's phone number to reach them.

12. Transit: looking up past trips

Transit is the history book. Use it to answer questions like "What time did Bus 2 reach Scotland Rd this morning?" It shows the last 3 days of trips, newest first.

1. **Search**: type a bus, route or driver name.
2. **Status menu**: show only running, planned, finished or cancelled trips.
3. **Exceptions**: tick this to see only trips where something went wrong (late, no driver, GPS gaps).
4. **A trip**: click it to see its details on the right: scheduled, started and completed times, how long it took, and how many stops were reached.
5. **Three tabs** under the times:
    - **Event log**: every step in order, like "Arrived at Village Plaza" and "Departed Village Plaza." **AUTOMATIC** means the driver's phone recorded it by itself; otherwise someone tapped it by hand.

- **Stops**: one row per stop with arrival time, departure time and how long the bus waited there.
- **GPS captures**: every location the phone sent. Mostly useful to a technical person checking a problem.

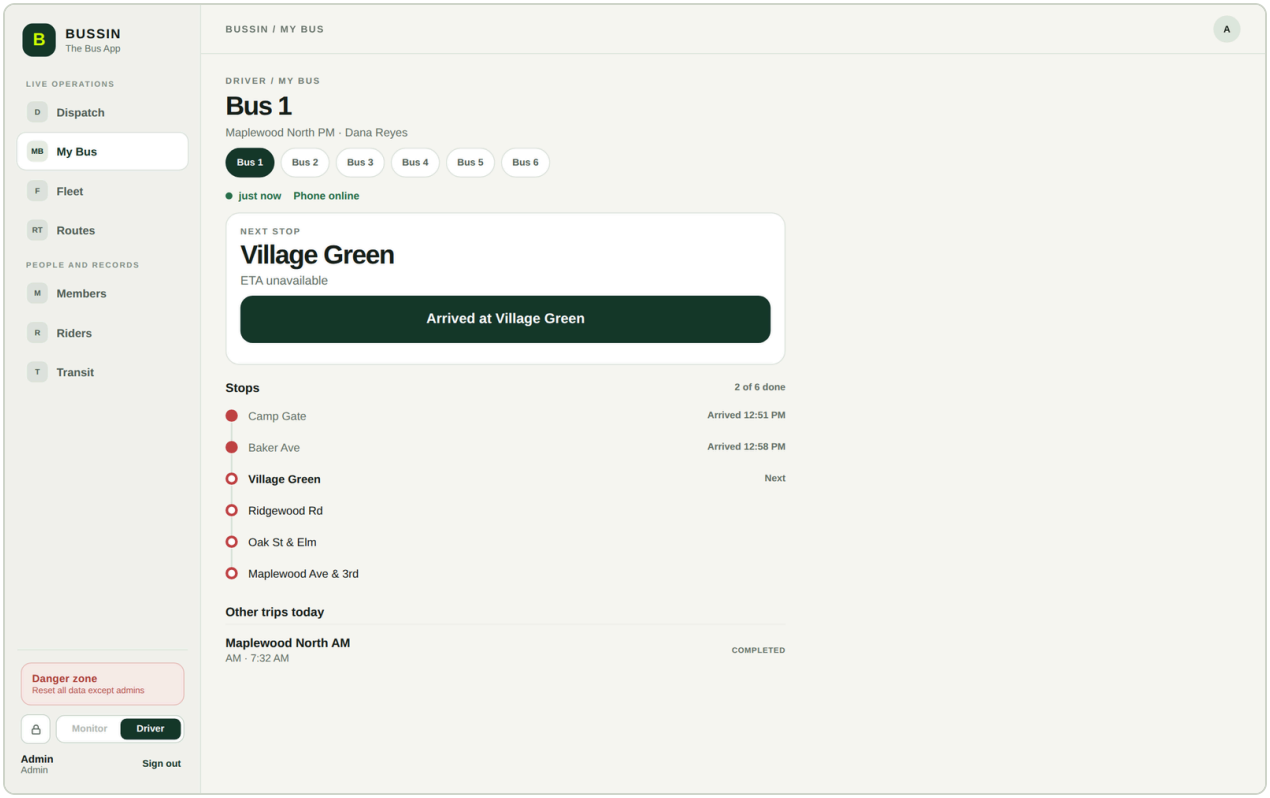

13. Monitor mode, Driver mode and the lock

The office screen has two modes. **Monitor** is the normal one. **Driver** is for when an office login is being used on the bus by the person driving: it hides every count of children and swaps the **Ride Check** page for a simpler **My Bus** page. The mode is remembered on that computer or phone only.

The mode switch sits at the bottom left, behind a lock, so nobody changes it by bumping the screen.

1. **Double-click the lock** (two quick clicks). It opens, and a small message confirms. A single click only shows a reminder.
2. Click **Monitor** or **Driver**. A message confirms the change, and the menu updates.
3. The lock closes by itself right after the change, or after 10 seconds if you do nothing.

The My Bus page (Driver mode)

- Pick your bus from the row of bus buttons at the top.

- The big box shows the **Next stop**. Tap **Arrived at ...** when you get there, and **Leaving ...** when you pull away. If you tapped too early, use **Not here yet, undo arrival**.
- If the trip has not started yet, a **Start trip** button appears instead. At the last stop it becomes **Finish trip**.
- The line under the bus name shows whether the driver's phone is online. The stop list below ticks off each stop with its arrival time.

Most drivers never see this page: with a staff login from section 7, the phone shows the simpler driver screen in section 14.

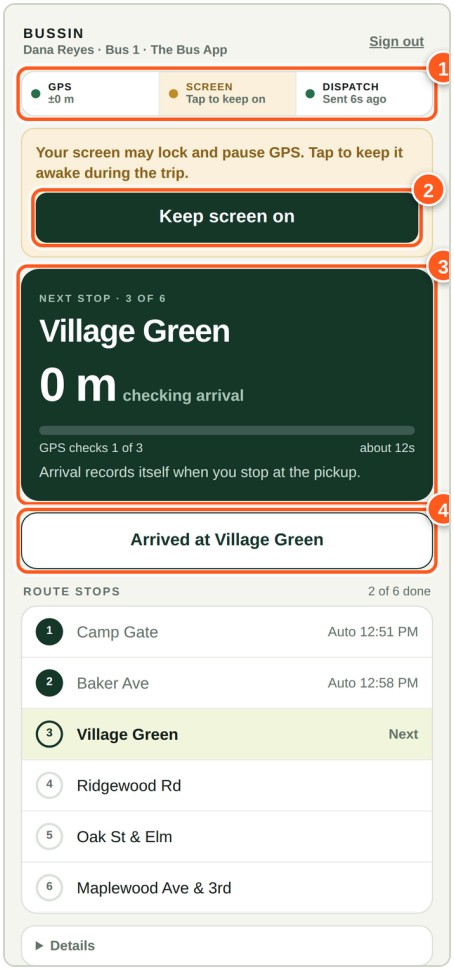

14. The driver's phone

A driver signs in on their own phone with the staff login from section 7 and sees one screen: their trip. The phone does most of the work. It sends the bus's location to the office every few seconds and records arrivals by itself when the bus stops at a pickup. The one rule: **keep Bussin open and on screen for the whole trip.**

Before the first trip

1. Open the Bussin web address in the phone's browser and sign in.
2. When the phone asks to use your location, tap **Allow**. Without it the office cannot see the bus.
3. Optional but handy: use the browser's **Share** menu and pick **Add to Home Screen**, so Bussin opens like an app.

During a trip

1. **The status strip**: three small lights. **GPS** (is the phone finding its location), **SCREEN** (will the screen stay awake) and **DISPATCH** (is the office receiving it, and how many seconds ago). Green means good.

2. **Keep screen on**: tap this at the start of every trip. Otherwise the phone may lock itself and stop sending the location.

3. **The big card**: the next stop, how far away it is, and progress as the phone confirms you have arrived. You do not need to do anything; "Arrival records itself when you stop at the pickup."

4. **Arrived at ...**: a backup button in case the automatic check does not catch the stop.

The full trip, step by step:

1. Until a trip is assigned, the screen says **Nothing assigned** and updates by itself. Leave it open.

2. When your trip appears, it shows the route, the departure time and a countdown. Tap **Start trip**. If you are more than a few minutes early, it asks whether to start early: tap **Start now** or **Go back**.

3. Drive the route. At each stop the phone records the arrival, then records the departure when you drive off. After you have waited a while at a stop, a **Leaving now** button also appears.

4. If an arrival was recorded by mistake, tap **Not here yet? Undo arrival**.

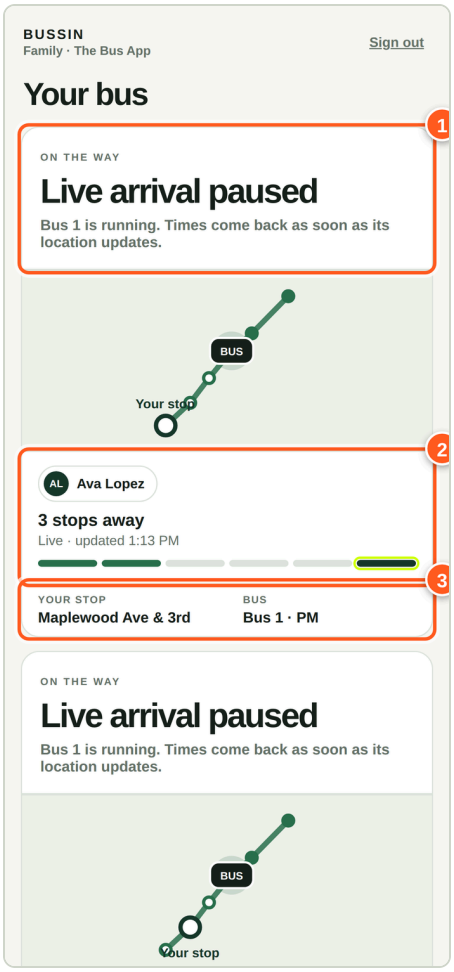

5. At the last stop the screen says "Everyone off? Finish the trip to free the bus." Check the bus, then tap **Finish trip**.

If the phone shows a warning

Message on the phone	What to do
Location is turned off for Bussin	Open the phone's Settings, allow Location for the browser or for this site, come back and tap **Try again**.
GPS stopped updating	Keep Bussin open and on screen, then tap **Restart GPS**.
Offline. Fixes will send when signal returns.	Nothing. Keep driving; the locations are saved and sent once there is signal.
Phone clock looks wrong	Set the phone's date and time to automatic in its Settings.

15. The family's phone

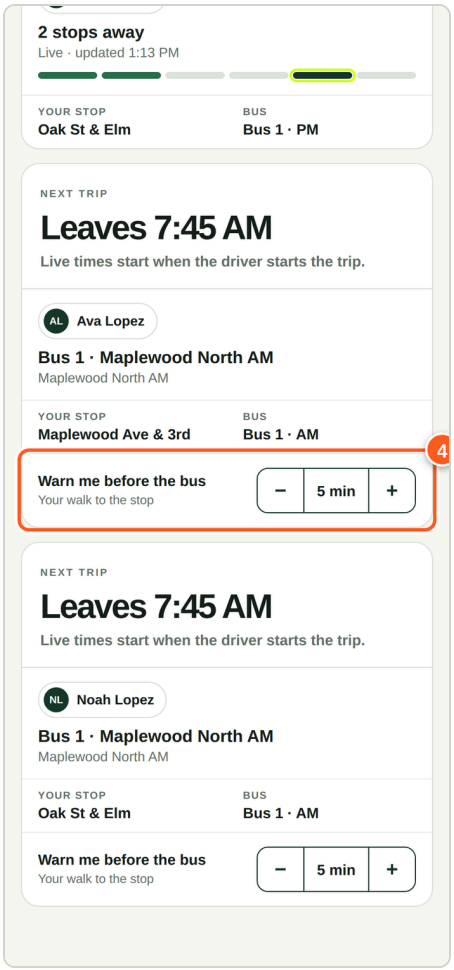

A parent signs in with their email and the temporary password from section 8, sets their own password, and then sees **Your bus**: one card per trip for each of their children. It updates by itself, so they can leave it open.

1. **The big message at the top** of each card tells the parent what to do right now (see the table below).

2. **The child and the bus's progress**: the child's name, how many stops away the bus is, when the location was last updated, and a bar of stops with theirs highlighted. A small map shows the bus on its way to **Your stop**.

3. **Your stop and Bus**: which stop and which bus this trip uses.

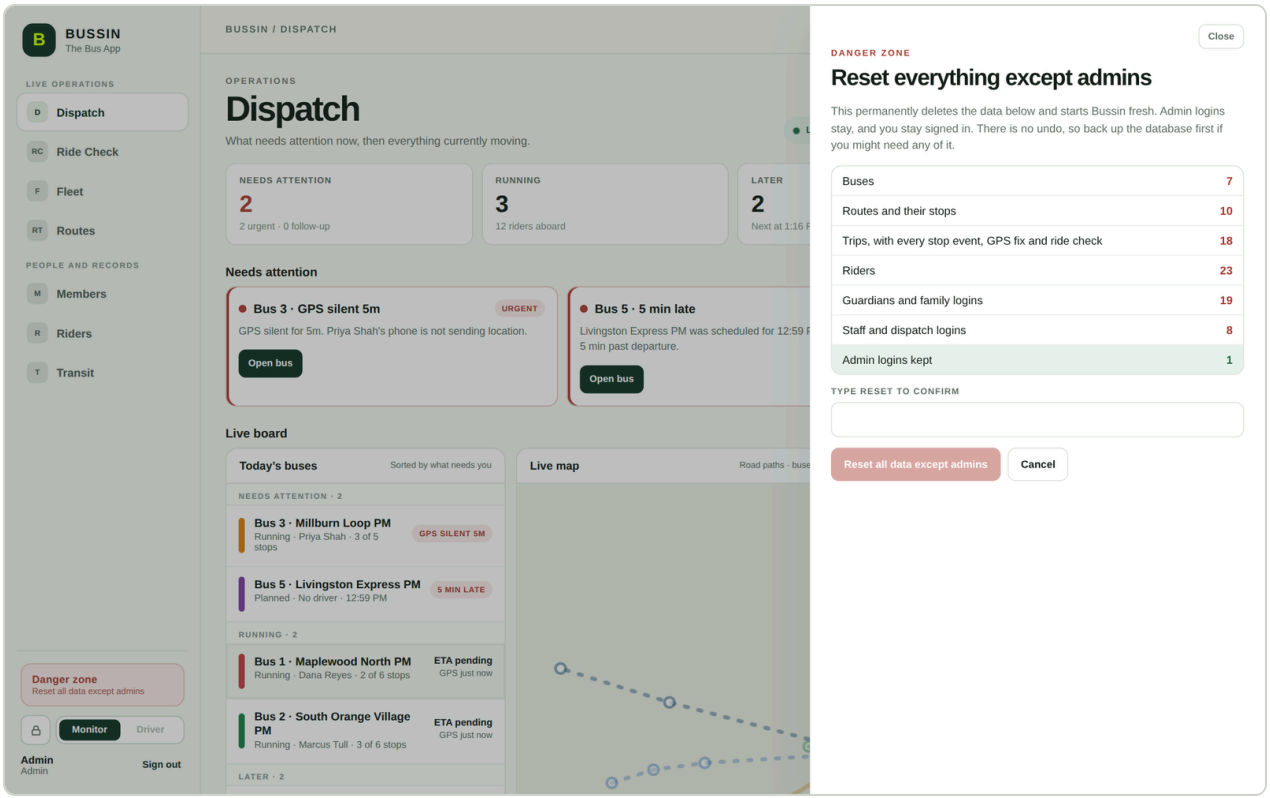

4. **Warn me before the bus** (morning trips): set how many minutes it takes to walk to the stop, using **−** and **+**. Bussin uses it to count down when to leave home.

Big message	What it means for the parent
NEXT TRIP or LATER TODAY, "Leaves 7:45 AM"	The trip has not started. Live times begin when the driver starts it.
LEAVE HOME IN 4:30	Morning: a countdown to when you should walk out the door, based on your walking time.
LEAVE NOW	Go now to make the bus.
BUS ARRIVES ABOUT 3:12 PM	Afternoon: when the bus should reach your stop.
ON THE BUS / DROPPED OFF	Your child was picked up, or the bus reached your stop.
ON THE WAY, "Live arrival paused"	The bus is running but its location is briefly out of date. Times come back on their own.
No bus today	No trip for your children right now. The page updates by itself.

16. Danger zone: wiping everything

You will almost never need this. The pink **Danger zone** box at the bottom left erases every bus, route, trip, rider, guardian and staff login, and starts Bussin fresh. Only admin logins survive. There is no undo. It exists for clearing out test data before the real season starts.

If you truly mean it: the panel lists how many of each thing will be deleted. Type the word `RESET` in capitals in the box, then click **Reset all data except admins**. The button stays grey until the word is typed exactly. To back out, click **Cancel**. If anything might be needed later, ask your technical contact to back up the database first.

17. Troubleshooting

Most problems come down to a missing setup step or a driver's phone that went to sleep. Find what you see in the left column.

What you see	Why	Fix
The Bus or Route list in Plan a trip is empty	No buses yet, or no route with stops	Add a bus in Fleet (section 6) or a route with stops in Routes (section 5).
"Add a guardian first" when adding a rider	A child needs at least one linked adult	Click **Add guardian** first (section 8).
The AM stop or PM stop list is empty	No route picked yet for that time	Pick the AM route or PM route first; its stops then appear.
Activate account is greyed out	The guardian has no email	Click **Edit** on the guardian, add an email, save, then activate.
A parent forgot their password		Riders page, Guardians tab, find them, click **Reset password**, give them the new temporary one.
After changing a password, you are back at Sign in	This is normal	Sign in again with the new password.
"Too many sign-in attempts"	10 wrong passwords in a row	Wait the minutes shown, then try again carefully.
Red "GPS silent" alert	The driver's phone locked or Bussin was closed	Call the driver: open Bussin, tap **Keep screen on**.
A trip will not start	No driver assigned	Pick a person under **Assigned staff** and click **Assign** (section 9).
Complete trip is greyed out	The bus has not reached its last stop	Wait for the last stop, or have the driver tap **Arrived** there.
Members and Riders are missing from the menu	Your login is not an admin	Ask an admin to make the change.

What you see	Why	Fix
The menu shows My Bus instead of Ride Check	This computer is in Driver mode	Double-click the lock, click **Monitor** (section 13).
"Connection unavailable"	The internet dropped or the server is restarting	Check your connection, then click **Retry**.
The grey **LIVE** tag says it is reconnecting	Brief connection hiccup	Nothing; the page still refreshes every 15 seconds and reconnects by itself.
